

# Cooling Towers

Sapphire Cooling Towers are made from tough fiberglass reinforced plastic (FRP) and have excellent structural strength to withstand high velocities and vibration. Sapphire cooling towers are designed in vertical induced draft counter-flow with uniform water distribution and optimum heat transfer.

Sapphire Cooling Towers are designed for high performance cooling applications. They are energy efficient and cost effective.

Sapphire Cooling Towers are designed as per clients' heat transfer requirement to complement Chillers; Cooling tower are additional units that can be installed to reduce heat load on the chillers, thereby reducing power consumption.
